**Frontier BioSciences Breaks Ground for Facility Expansion of its China Facility**

Germantown, MD – June 15, 2008 – Frontier BioSciences, Inc. breaks ground of its facility expansion (center of photo) at its laboratory facility in Chengdu, China, PRC. The expansion features an additional 140,000 square-foot facility, adjacent to the current facility, with 31 new small animal rooms and 34 large animal rooms, increasing testing capacity by almost 200%. This new facility will complement the current facility located in the Hi-Tech Development Zone of Chengdu.

This expansion will enhance the existing capabilities and expertise of the WestChina-Frontier Pharmatech Co., Frontier Biosciences, Inc.'s strategic partner in the preclinical contract research services business in China.

The existing facility (left side of photo) currently houses a small animal barrier facility with 16 animal rooms and a large animal conventional facility with 30 animal rooms, and 4 supporting labs, equipped with the latest advanced technology and operated by experienced staff with international CRO experience. It has conducted safety and efficacy studies for more than 60 preclinical candidates in the past three years.
